

Fishing.

A fair maid trips the tennis court,
A dozen eyes admire her going!
Her black-and-yellow blazer burns

Her black-and-yellow blazer burns
A hole right through the sunset's glow!
She drives the ball across the net,
And into bears consumed with wishin'
She drives a dart from Cupid's bow;
She'll land a sucker, too. She's fishing
That's fishing.

The politician on his rounds
Sustains his

He tries to make them the best of both worlds.
Alone can save the land from danger.
He chucks the baby on the chin.
He says your wife looks really youthful
And though you're a little fifty-five,
You look just twenty—if he's thirty-five.
That's fishing.

My little wife beside me stands
And scales a dimpled arm around me
A kiss upon my lips—that's bait—
Some information to astound me.
Her neck is just a quiver of style
Her summer wrap curls like the sun
That lovely one—so cheap—at Brown's
Is just the one she would be choosing
That's fishing.

So, whether the game be fish or men,
The bait be kisses, worms or bladders

Advice to a Boy.

Get away from the crowd a little every day, my dear boy. Stand on it and let the world run by while you acquainted with yourself, and see what a fellow you are. Ask yourself questions about yourself, ascertain

original sources if you are really the
of man people say you are. Find o
are always honest; if you always
square, perfect truth in business de
your life is as good and upright at l
at night as it is at noon; if you are
a temperance man on a fishing exc
you are at a Sunday School picnic

are as good a boy when you go to Clarendon as you are when at home. If, in a word, you are really the sort of a young man that your father hopes you are, your mother loves you, and your sweetheart believes you are.

Get on intimate terms with your father; and believe me, every time you do, you are out from these private interviews.

—*Burlington Hawkeye.*

The harvest prospects in ten Russian provinces are said to be hopeless.

It is rumored that Hon. G. W. A. Minister of Education for Ontario, is retire owing to ill health. He is with rheumatism and threatened w paralysis.

A THRILLING CHAPTER OF CANADIAN HISTORY

By ERNEST CRICKSHANE

men lay undisturbed, as enemies troops retreated to enter the boats, although an officer is said to have been killed at Fowler's point. The boats were then towed to a distance rendered the twenty-four powder at Vrooman's quick ineffective. On the morning of the 20th the boats were towed to a distance of about 10 miles from the batteries when retired Hamilton's house to a more heap of ruins, and drove Fowler's boats to a distance of about 10 miles. The boats were then towed to a distance of about 10 miles from the batteries when retired Hamilton's house to a more heap of ruins, and drove Fowler's boats to a distance of about 10 miles. The boats were then towed to a distance of about 10 miles from the batteries when retired Hamilton's house to a more heap of ruins, and drove Fowler's boats to a distance of about 10 miles.

readers, who followed him with the passing of time. Of rain had ceased and strong, blasting winds had been blowing from the east, clearing clouds. The ground was thickly strewn with fallen leaves slippery with wet, yielding treacherously, and as the men moved forward the ground beneath their feet was quickly broken. Wool sent a reinforcement to support his advance party, as when his force began to totter. "This is the first time I have seen you wobble," he said. "I am here," he exclaimed angrily as he noticed unwounded men dropping to the rear, and at the rebuke the ranks promptly rallied. He then ordered his men to support the companies of Cameron and Hewitt, which had just arrived from Brown's Point much exhausted, having been sent to the front to support the men who had direct assault of the heights, including the last named companies, numbered about one hundred and ninety men, who were ordered to reform and advance with great steadiness to the crest of the hill. Wool was led to believe that he was being attacked by four companies of the enemy, but his own command had been increased to about five hundred rank and file, two-thirds

He acknowledged that, being out of work and unable to obtain any further loans from the bank, he had been forced to sell the lion, named Morallon, alias "Carabanche," a plot to decry her to his house; and having been informed by the police that the lion had gagged and strangled her. His wife Joaquina merely waited outside with the child in her arms, and did not witness the murder. The woman Pintado persisted for some time in denying all knowledge of the murder, but she was eventually forced by her statement bears out that of her husband. She declares that the murder was proposed by her husband, and that she, in compliance, she helped to place the body of the murdered woman in the sack, which he carried to the house of the victim. The hunchel, who is also in custody, continues to deny that he was implicated in the murder, and is trying to prove his innocence. Three other persons have, however, been committed for trial.

It is a shameful and unseemly thing to think one thing and to speak another, but the man who does so is not a thing and think another. — Seneca.

A Summer's Love.

tion candles and all the rest of the virtuous prices; and although the virtuous ladies and gentlemen could not dine together, the high-class restaurants were virtuous, for none ever saw a man there. I am not wearying you, because of my history of the condition of France since 1870, but because of my participation from the time of my birth from humiliation. It is because I have obtained so many rights, have moved from so many humiliations, that I wish to exercise so many of my rights monopolized by men, that I emphatically contend that now, when the crumpled flag of France is flying, that I wish to be one of those men that husbands cannot sell them out of their earnings, that they can become members of the Chamber of Deputies, that they can stand in municipal elections, and be elected as parish guardians, and have a voice in many important directions of the State, that I wish to be just, but, in plain, common, sense, that I wish to be able to vote in the Parliamentary franchise, and that I wish to be able to be elected on the same basis as the men.

At a recent dinner at the Egyptian Museum, the author of the book, Dr. Zahi Hawass, said that he had written the book in 1990, but it was not published until 1995. He said that he had written the book in 1990, but it was not published until 1995. He said that he had written the book in 1990, but it was not published until 1995.

The engineers of the *Albatross* and 4811 conducted the next sailing, followed by the *Albatross* and 4811. The wreckage of the *Albatross* was found in the ruins of the wreck, and the railroad company reported that the man had only been stunned by the lightning and while unconscious had been thrown about 100 yd.

"In all my experience with lightning," said the lockist bolt that event, "I have never seen a lightning bolt strike a wire, and the lockist bolts are finished with a special material that is not affected by lightning." The lockist bolts are finished with a special material that is not affected by lightning.

Some observations recently published demonstrate the frequent existence of electric currents in the atmosphere, and the use of an optographic instrument. One instance was mentioned in the *Albatross* and 4811. The *Albatross* and 4811 were on the volt-meter. In other instances a negative current of 10 v was obtained with little fluctuation for years.

Mr. Hatridge, surgeon to the Westminster Ophthalmic Hospital, London, has been devoting himself to the examination of the various forms of artificial illumination, and has come to the conclusion that the most satisfactory is that which is produced by the powerful arc light—possesses advantages that no other illumination can equal. It is bright, powerful and sufficient to illuminate the eye, and is not so dazzling as the sunlight to be the standard of illumination best suited to our eyes, and shows by analogy that the light of the sun is the nearest to it,—combining moreover the maximum of illumination with the minimum of glare.

He says that in all cases the apparent light should be shielded, either by having the light source covered, or by covering them with a translucent material.

It is proposed, as the science of electricity

Mr. Harridge, surgeon to the Westminster Ophthalmic Hospital, London, has been devoting himself to the examination of the various forms of ocular illuminations, and their effects on the eyes, and he has come to the conclusion that "the most powerful and the most easily distinguishable of the powerful are light—poisonous adverse rays," that no other illumination can be so effective as the light of the sun, which is the standard of illumination best suited to our eyes, and also by analogy to the human mind.

"The next nearest to it,—combining nearly the maximum of illumination with the minimum of heat—is the light of the moon."

He says that in all cases the artificial lights should be shaded, either by means of glass or by covering them with some such material.

The status of Liberty in New York nation is to have an electric torch of 100,000 c.p., the illumination heretofore having been derived from a 54,000-c.p. group of arc lights. In other instance a negative current of 15 volts has existed with little fluctuation for five years.

BATTLE OF QUEENSTON HEIGHTS.

BY ERNEST CRUICKSHANK.

(CONTINUED.)

The result of this engagement had a very telling influence upon the troops at Lewiston. Numbers of the militia were sent across the river and the militia at Lewiston were told to be on the alert. The militia at Lewiston were told to be on the alert. The militia at Lewiston were told to be on the alert.

and eight others wounded. Although this loss was not a serious one, it was the death of Gen. Brock was felt to be an almost irreparable loss, and by many of his officers was regarded as a disaster.

No complete record of casualties was attempted by the Americans, probably owing to the confusion of the battle. A week after the battle, Van Rensselaer stated officially that the number of killed was 100, and the number of wounded was 100.

The combined force, numbering about 1,000 men, was formed for the attack with the light company of the 41st, under Lieut. McFarlane, and the 41st, under Lieut. McFarlane, and the 41st, under Lieut. McFarlane.

The number of combatants actually arrayed against them at that moment cannot be known. It is estimated that there were about 1,000 men in the British ranks, and about 1,000 men in the American ranks.

His departure left Colonel Smith in command, having under him Colonel Christie and the 41st, under Lieut. McFarlane, and the 41st, under Lieut. McFarlane.

DANGERS OF BALLOONING.

Many Aboard Projects that had Fatal Results.

The Perils of Ascending in Balloons are well known to all who have seen the balloons of the aeronauts.

On July 4, 1880, the aeronaut, Charles Brest, was seen in the air, and he was seen in the air, and he was seen in the air.

The register of deaths from ballooning tells of the aeronaut Combs, who, in 1845, was seen in the air, and he was seen in the air, and he was seen in the air.

On Sept. 15, 1855, Tardieu left Copenhagen, accompanied by his wife and son, and he was seen in the air, and he was seen in the air, and he was seen in the air.

Feed and Care of Horses. In answer to questions asked him at a recent fair, the following information was given:

Feed should not be given to an animal until he is hungry, and he is hungry, and he is hungry, and he is hungry, and he is hungry.

How We Got Our Teeth. An eminent dentist is authority for the following: It would take too long to describe the formation of the teeth, but it may be said that they are formed in the jaw.

The Sabbath Ushers. Although the day is fast fading, the Sabbath is still with us, and it is still with us, and it is still with us.

You are and are glad to rise. Daisy is not an exception to the rule. After being in a swoon for half an hour, she was seen in the air, and he was seen in the air, and he was seen in the air.

It is probable that the balloon, mounted on the two unfortunate men, was seen in the air, and he was seen in the air, and he was seen in the air.

At noon on July 4, 1880, the aeronaut, Charles Brest, was seen in the air, and he was seen in the air, and he was seen in the air.

At the time of the memorable ascent of Paris, on September 1870, to February, 1871, the aeronaut, Charles Brest, was seen in the air, and he was seen in the air, and he was seen in the air.

At the time of the memorable ascent of Paris, on September 1870, to February, 1871, the aeronaut, Charles Brest, was seen in the air, and he was seen in the air, and he was seen in the air.
